

AMENDMENTS TO THE CLAIMS

Please amend claims 40, 41, 42, 43, 48, 49, and 51 as indicated below.

Claims 1-7 (cancelled).

Claim 8 (previously presented). A document processing apparatus, comprising:

- a media path;
- a first roller disposed proximate the media path;
- a knife defined by an edge and supported by the first roller, wherein the edge is selectively extendable from the first roller;

- a second roller having an elongated slot formed therein and disposed proximate the first roller such that a sheet of media moving along the media path passes between the first roller and the second roller; and,

- a cutting anvil disposed within the second roller and operably moveable along a path substantially transverse relative to the elongated slot from a first position in which the cutting anvil is withdrawn from the slot to a second position in which the anvil is exposed within the slot.

Claim 9 (previously presented). The document processing apparatus of claim 8, and further comprising a creasing anvil disposed within the second roller and operably moveable from a first position in which the creasing anvil is withdrawn from the elongated slot to a second position in which the creasing anvil is exposed within the elongated slot.

Claim 10 (canceled).

Claim 11 (previously presented). The document processing apparatus of claim 8, and wherein the first roller further comprises a cam disposed within the elongated slot and in contact with the knife, the cam configured to slidably move along a portion of the length of the first roller and thereby operably move the knife from the first position to the second position.

Claims 12-37 (canceled).

1 Claim 38 (previously presented). The document processing apparatus of claim 8,
2 wherein the path is substantially defined by an anvil receiving slot contained within
3 the second roller.

4 Claim 39 (previously presented). The document processing apparatus of claim 8,
5 wherein the path is substantially arcuate and substantially concentric relative to the
6 second roller.

7 Claim 40 (currently amended). A document processing apparatus, comprising:
8 a media path;
9 a roller disposed proximate the media path;
10 an elongated slot defined by the roller;
11 a knife defined by an edge and supported within the elongated slot; and
12 an anvil device disposed within the roller and operably movable between an
13 exposed position in which the anvil device is in substantially juxtaposed registered
14 alignment with the slot and a withdrawn position in which the anvil device is not in
15 substantially juxtaposed registered alignment with the slot~~along a path substantially~~
~~transverse relative to the elongated slot.~~

16 Claim 41 (currently amended). The document processing apparatus of claim 40,
17 wherein:

18 the knife is movable between a retracted position and an extended position;
19 and,

20 ~~the path~~ movement of anvil device into the exposed position is substantially
21 blocked by the knife when the knife is in the extended position and substantially
22 unblocked when the knife is in the retracted position.

23
24
25 (Continued on next page.)

1 Claim 42 (currently amended). The document processing apparatus of claim 41,
2 wherein[[:]]

3 ~~the anvil device is movable along the path between a first position in which~~
4 ~~the anvil device is withdrawn from the slot to a second position in which the anvil~~
5 ~~device is exposed within the slot; and,~~

6 movement of the knife to the extended position is substantially blocked by the
7 anvil device when the anvil device is in the exposed position.

8 Claim 43 (currently amended). The document processing apparatus of claim 40,
9 wherein the anvil device is movable between the exposed position and withdrawn
10 position along ~~[[the]]~~a path transverse to~~between a first position in which the anvil~~
11 ~~device is withdrawn from the slot to a second position in which the anvil device is~~
12 ~~exposed within the slot.~~

13 Claim 44 (previously presented). The document processing apparatus of claim 40,
14 wherein the anvil device comprises a cutting anvil.

15 Claim 45 (previously presented). The document processing apparatus of claim 44,
16 wherein the cutting anvil defines a notched cutting slot.

17 Claim 46 (previously presented). The document processing apparatus of claim 40,
18 wherein the anvil device comprises a creasing anvil.

19
20 Claim 47 (previously presented). The document processing apparatus of claim 46,
21 wherein the creasing anvil defines a rounded creasing slot.

22
23
24
25 (Continued on next page.)

1 Claim 48 (currently amended). A document processing apparatus, comprising:
2 a media path;
3 a roller disposed proximate the media path;
4 an elongated slot defined by the roller; and
5 an anvil device disposed within the roller and operably movable along a path
6 substantially transverse relative to the elongated slot wherein the anvil device is
7 movable along the path between a first position in which the anvil device is
8 withdrawn from the slot to a second position in which the anvil device is exposed
9 within the slot.

10 Claim 49 (currently amended). The document processing apparatus of claim 48, and
11 further comprising a knife disposed wherein the anvil device is movable along the
12 path between a first position in which the anvil device is withdrawn from the slot to a
13 second position in which the anvil device is exposed within the slot.

14 Claim 50 (previously presented). The document processing apparatus of claim 49,
15 wherein the elongated slot is substantially blocked by the anvil device when the anvil
16 device is in the second position.

17 Claim 51 (currently amended). The document processing apparatus of claim 48,
18 wherein the path is substantially defined by an anvil receiving slot contained within
19 the ~~second~~ roller.

20 Claim 52 (previously presented). The document processing apparatus of claim 48,
21 wherein the path is substantially arcuate and substantially concentric relative to the
22 roller.

23 Claim 53 (previously presented). The document processing apparatus of claim 48,
24 wherein the anvil device comprises a cutting anvil.

25 Claim 54 (previously presented). The document processing apparatus of claim 48,
wherein the anvil device comprises a creasing anvil.
